The
Cognitive
Self

The Feeling
Self

The Social
Self

Self-concept:

knowledge of ourselves, including our beliefs about our personality traits, physical characteristics, abilities, values, and roles, as well as the knowledge that we exist as individuals.

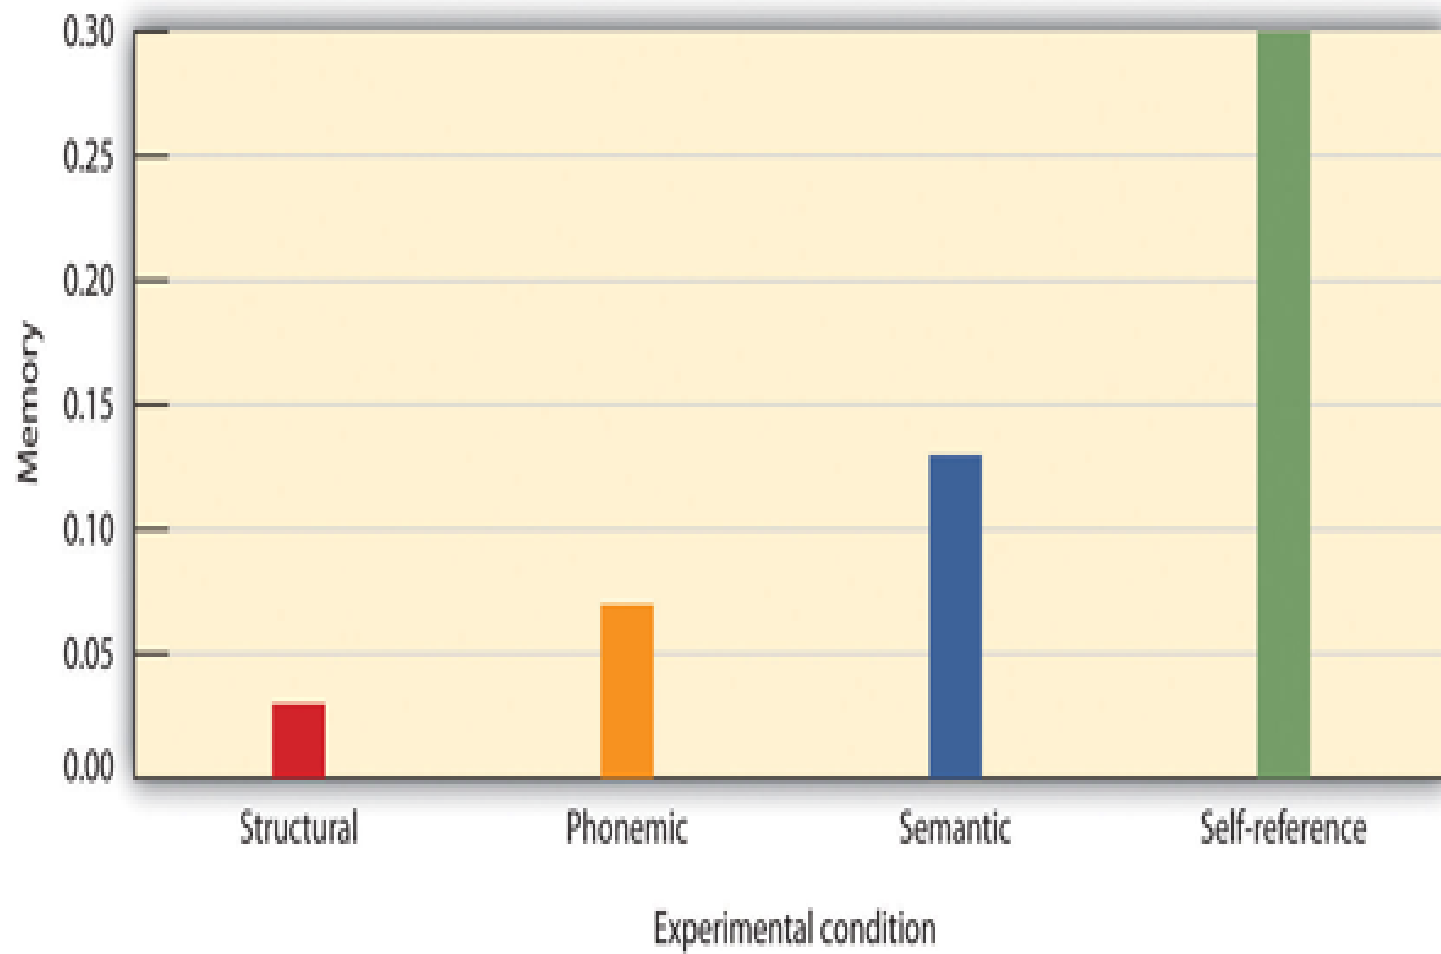

Figure 3.4 The Self-Reference Effect

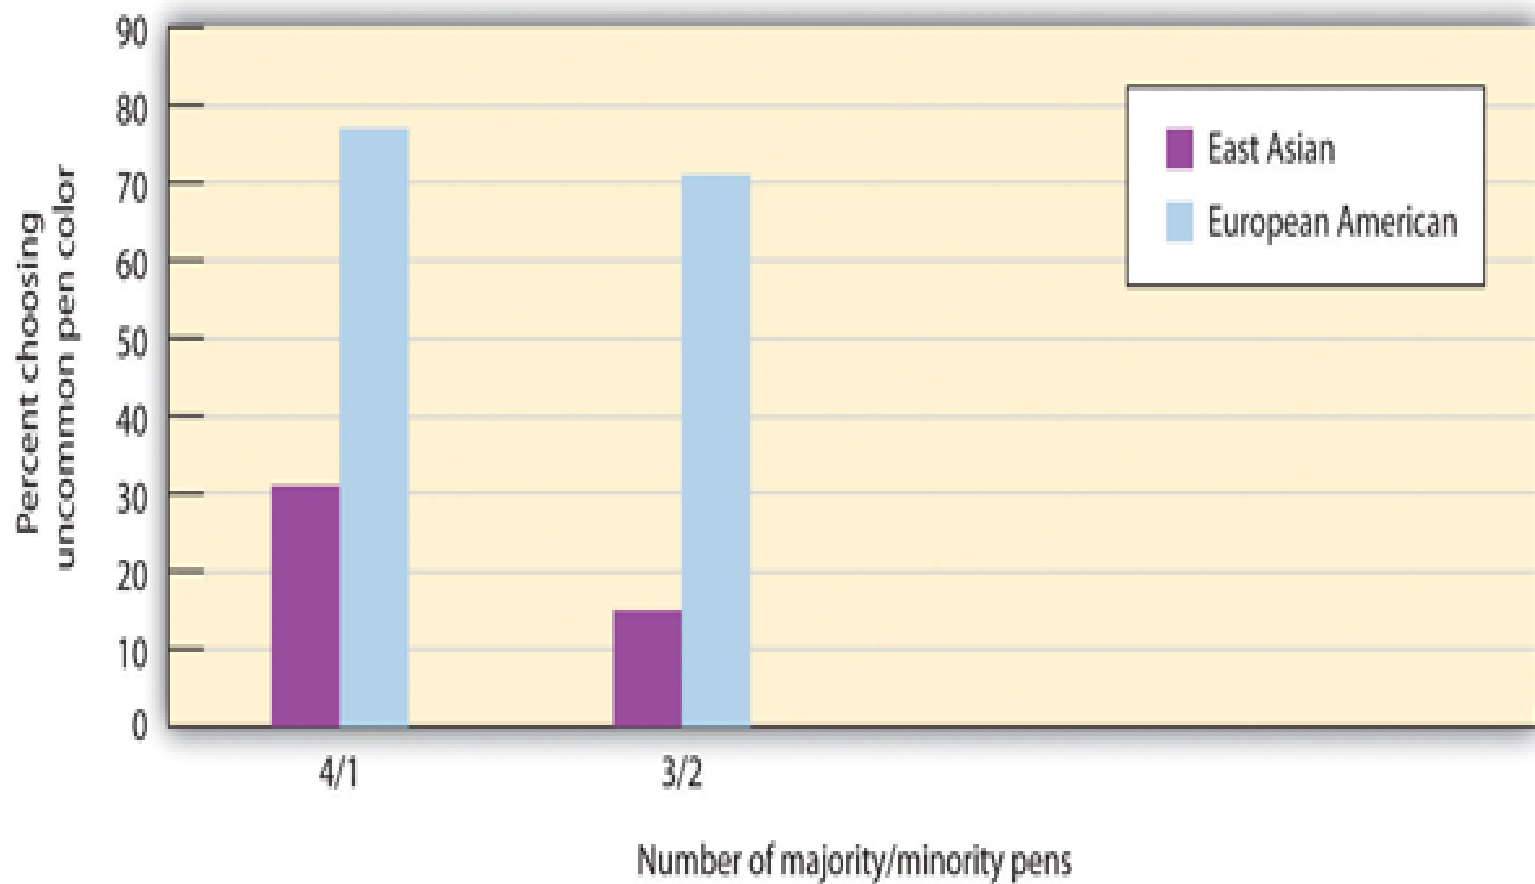

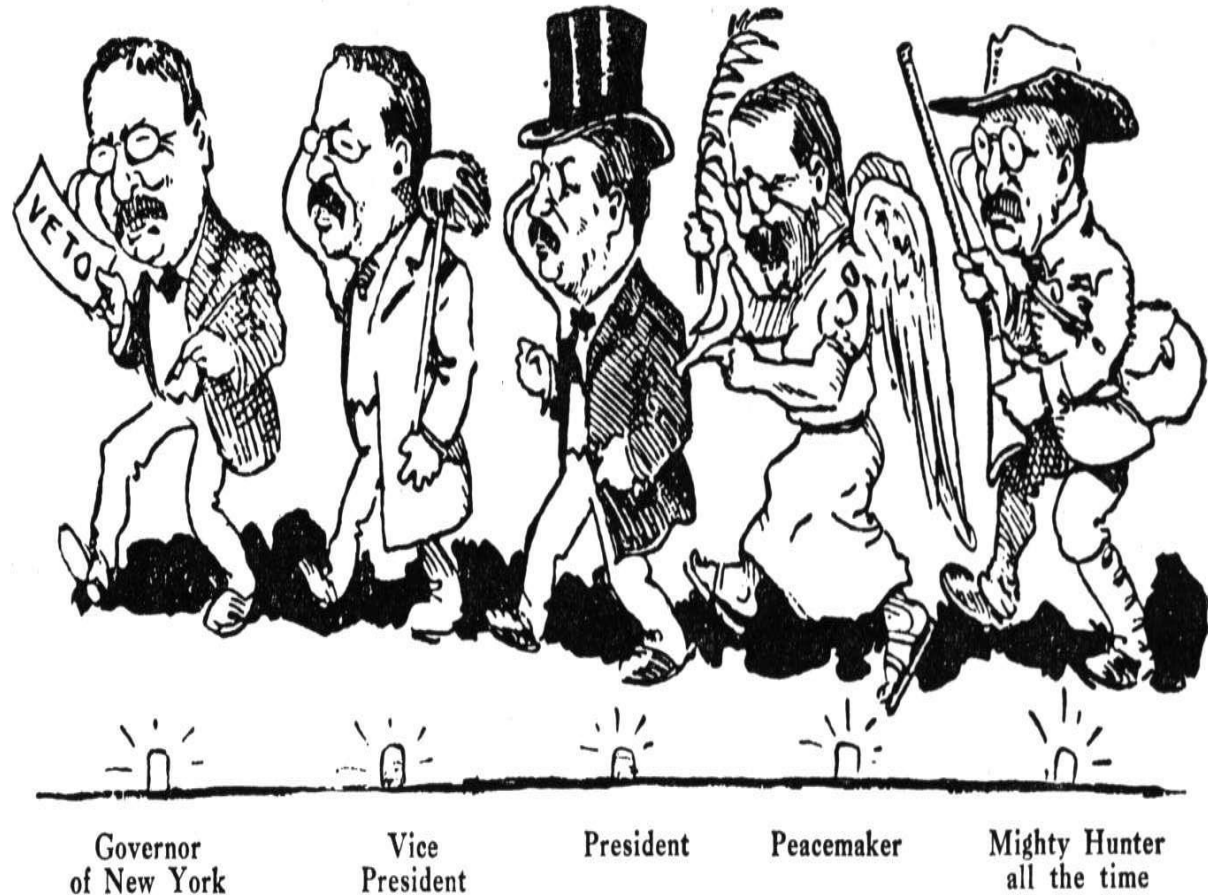

Figure 3.5 Cultural Differences in Desire for Uniqueness

Self-complexity:

*extent to which
individuals have
many different and
relatively
independent ways
of thinking about
themselves.*

Self-concept clarity: *extent to which an individual's self-concept is clearly and consistently defined.*

Self-consciousness:

when our self-concept becomes highly accessible because of concerns about being observed and potentially judged by others.

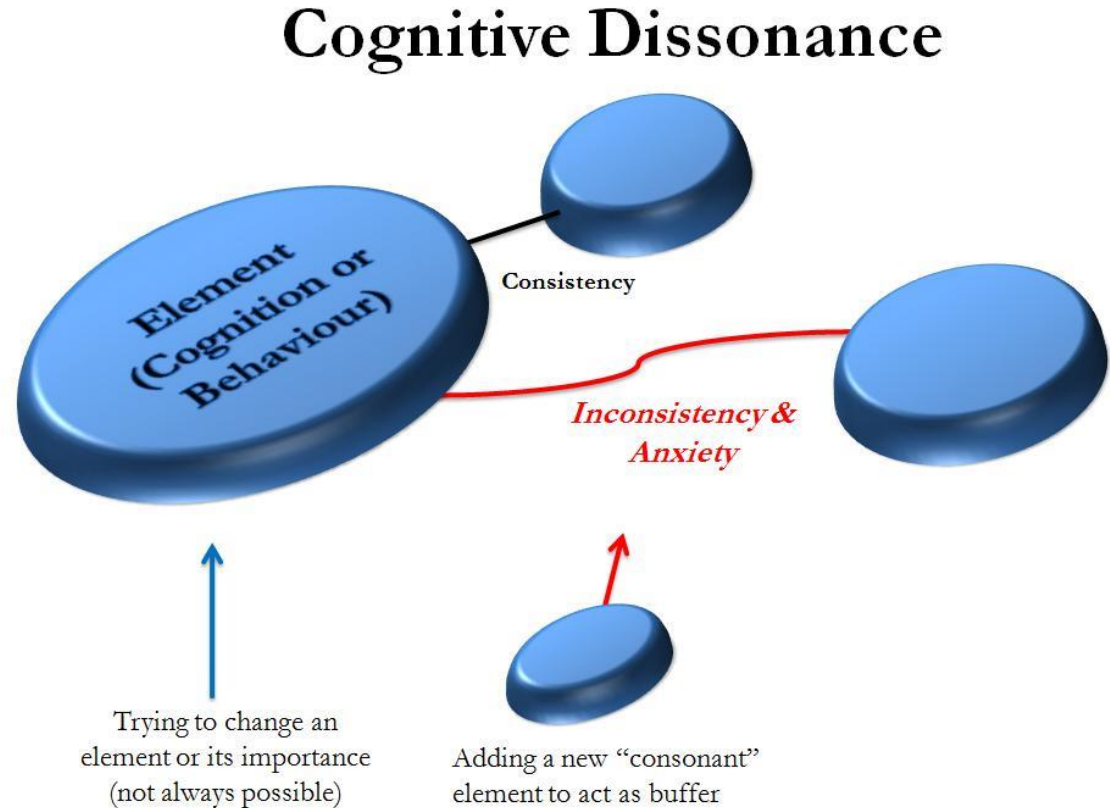

Deindividuation:
*the loss of individual
self-awareness and
individual
accountability in
groups.*

Figure 3.6 Examples of situations that may create deindividuation include wearing uniforms that hide the self and alcohol intoxication.

Self-discrepancy theory: *when we perceive a discrepancy between our actual and ideal selves, this is distressing to us.*

Cognitive dissonance: *the discomfort that occurs when we respond in ways that seem inconsistent.*

Self-affirmation theory:
When people try to reduce the threat to their self-concept posed by feelings of self-discrepancy by focusing on and affirming their worth in another domain, often unrelated to the issue at hand.

When people try to reduce the threat to their self-concept posed by feelings of self-discrepancy by focusing on and affirming their worth in another domain, often unrelated to the issue at hand.

```

The
Cognitive
Self

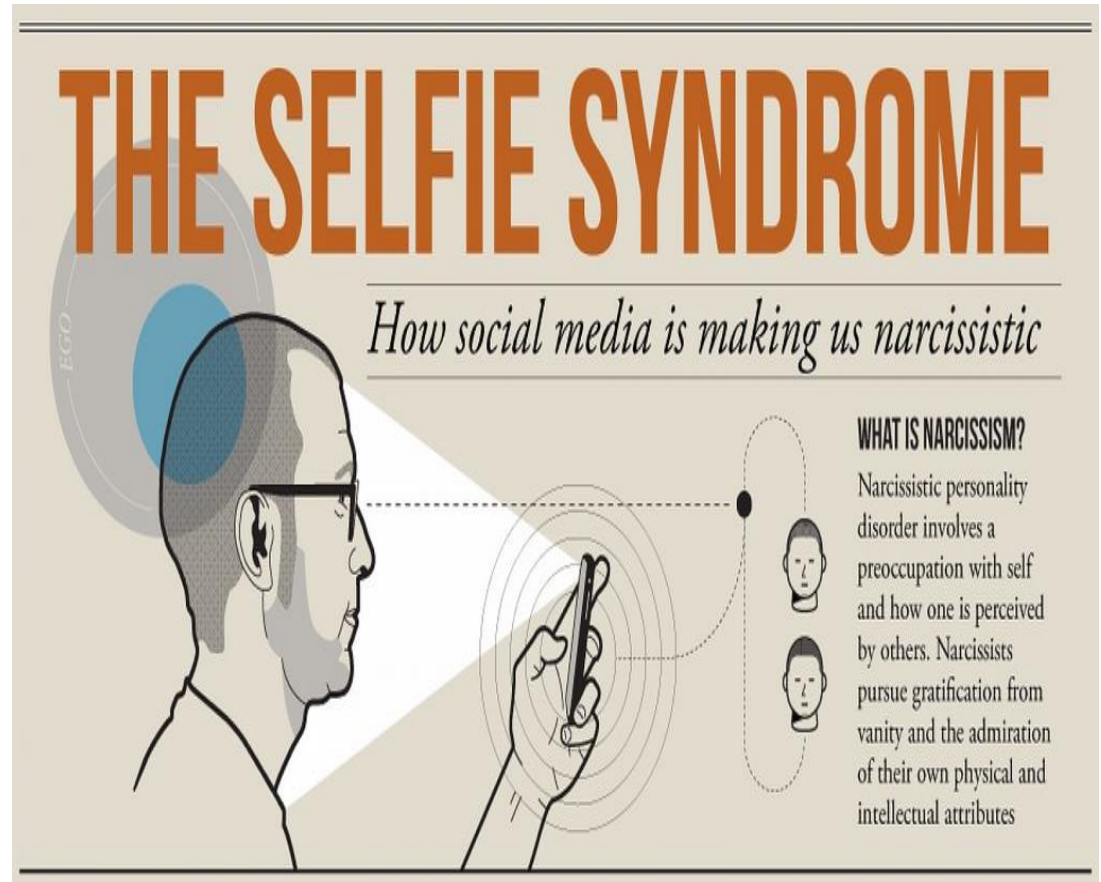

The Feeling
Self

The Social
Self

Self-esteem: *the feelings (positive or negative) that we have about ourselves.*

Narcissism: *a personality trait characterized by overly-high self-esteem, self-admiration, and self-centredness.*

The Self

```

The
Cognitive
Self

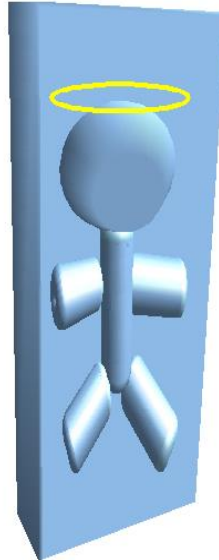

The Feeling
Self

The Social
Self

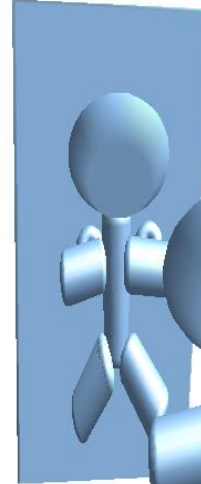

Looking-glass self: *part of how we see ourselves comes from our perceptions of how others see us.*

The Looking Glass Self

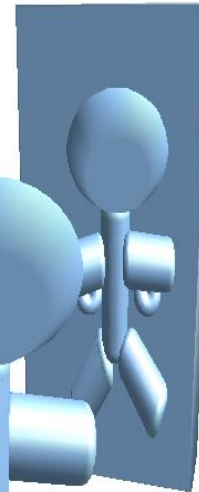

How my mom and dad see me.

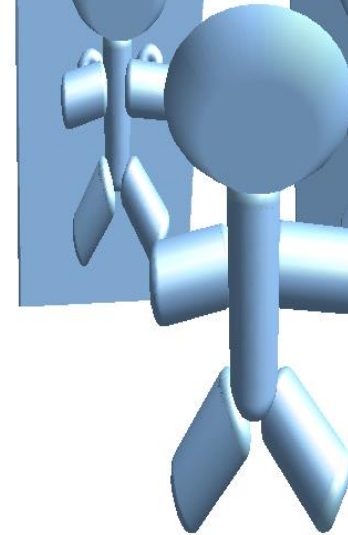

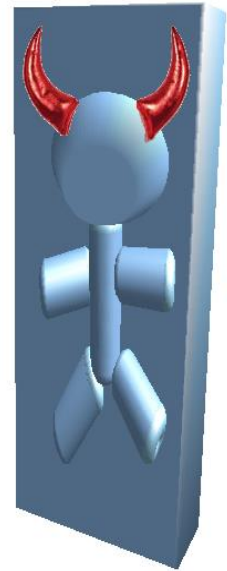

How my girlfriend sees me.

How my older brother sees me.

How my ex-girlfriend sees me.

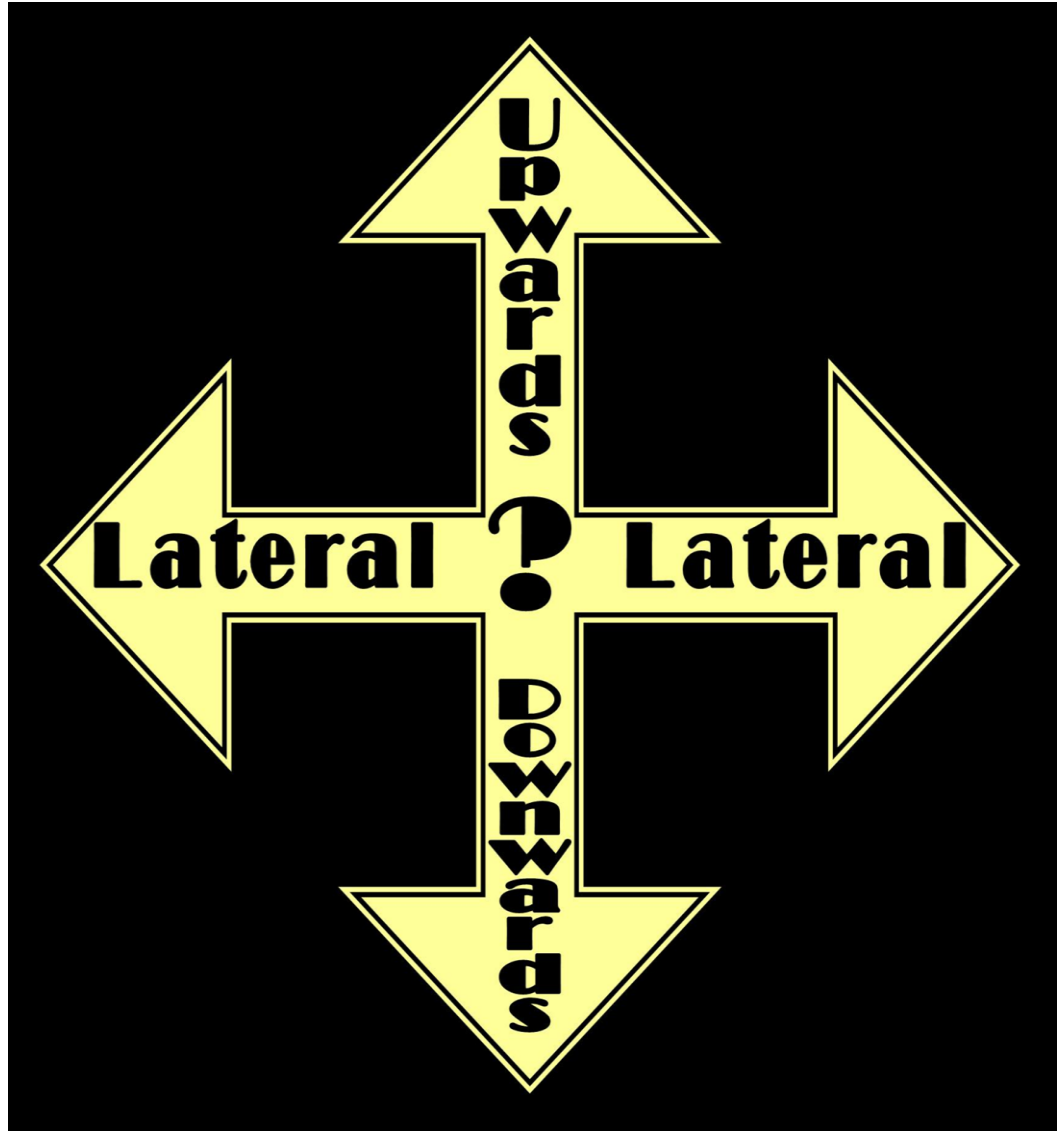

Self-labeling: *when we adopt others' labels of us into our self-concept.*

Internalized prejudice: *when we turn prejudice directed towards us by others onto ourselves.*

**Social
comparison:**

*when we learn
about our abilities
and skills, about the
appropriateness
and validity of our
opinions, and about
our relative social
status by comparing
or own attitudes,
beliefs, and
behaviours with
those of others.*

Social identity theory: *we draw part of our sense of identity and self-esteem from the social groups that we belong to.*

Figure 3.11 Social identity refers to the positive emotions we experience as a member of an important social group.

**Basking in
reflected glory:**

*when we use and
advertise our
ingroups' positive
achievements to
boost our self-
esteem.*

Self-presentation: *the tendency to present a positive self-image to others, with the goal of increasing our social status.*

Figure 3.12 Being seen positively by others helps us to feel positive about ourselves.

Self-monitoring:

the tendency to be motivated to regulate our behaviour to meet the demands of social situations.

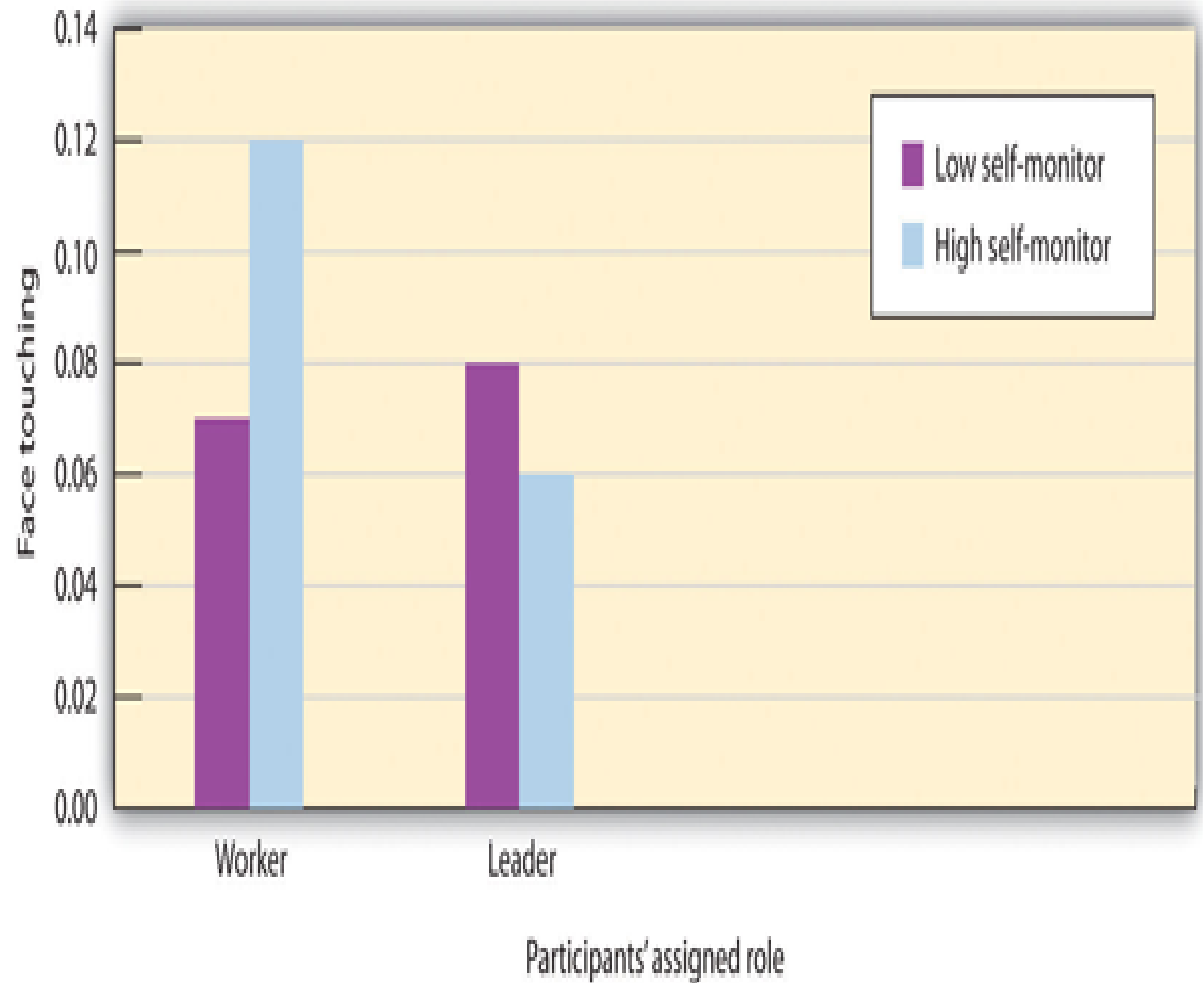

Figure 3.14: Self-Monitoring and Behavioral Mimicry
